

Verifysoft Technology is owner and distributor of leading software test and analysis tools. Our technologies are successfully used worldwide to enhance the software quality in hundreds of companies. The Test Coverage Analyzer Testwell CTC++ is the leading tool for measuring coverage on host and on all embedded targets.

To assist our customers using the Testwell product line, we are looking for an

## Application Support Engineer (m/f/d)

### Your Tasks

- You advise developers technically
- You support customers who evaluate our software tools
- You are responsible for the whole processing of support incidents
- You work out solutions for support cases – on your own as well as together with the team

### Your Profile

This position is suitable for experienced support engineers or developers as well as young, ambitious professionals. The following skills and properties are necessary:

- Goal-oriented, friendly communication in English and, ideally, in German
- Strong willingness and ability to learn new topics on your own
- Knowledge about typical tool chains in software development (IDEs, compilers, build processes)
- Experience with different operating systems (Windows, Linux, Mac OS)
- Experience in software development is an advantage (C, C++, C#, Java, Perl)

### We offer

- Intensive introduction in our products and services
- Flat hierarchies and fast decision making
- Pleasant working atmosphere and performance oriented payment

Please contact us for further information: +49 781 127 8118-0

We look forward to your application via email to:
