

Verifysoft, software test and analysis tools specialist, presents you the evolutions and last news of the software quality industry.

## Graphical Interface for Software Complexity.

Verybench, the new **graphical interface** for metrics tools Testwell CMT++ and CMTJava is now available.

Verybench shows the **metrics** of McCabe, Halstead and the Maintainability Index (MI) according to the points of view of the developers, reviewers, testers or managers. With Verybench, several different report formats can be generated from measured source code files: text, HTML, XML, CSV and PDF.

Based on the static properties of the program code, Testwell CMT++ and CMTJava give estimations of the probability of errors in the application, of the logical volume of the code, of the maintainability, etc. and so help to develop **codes easier to maintain and to test**.

This graphical interface will be soon available for the code coverage analyser Testwell CTC++/ CTC for Java and C#

## Test Coverage for any Embedded Targets

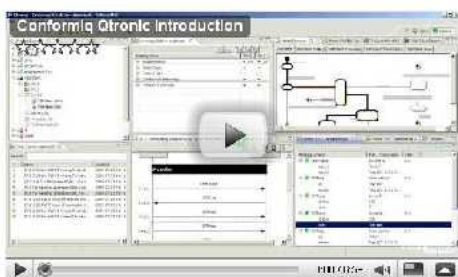

Verifysoft Technology developed an add-on (bitcov-add-on) for the code coverage analyser Testwell CTC++, which permits to test **any embedded targets** including **microcontrollers, graphics cards** and even the smallest targets. Compared to usual code coverage, the bitcov-add-on requires 40 times less RAM.

Testwell CTC++ is a very efficient tool for code coverage (C, C++, Java and C#). It measures **all coverages levels** up to C3 level (Multi condition coverage and Modified Condition/Decision Coverage MC/DC) and can be used to obtain **quality certifications** in automotive, avionics and medical industries.

## Video Conformiq Qtronic™: Automatic Test Generator

The manual elaboration of test cases takes time and leads to risks of errors.

Learn in 7 minutes how *Conformiq Qtronic™* increases significantly your productivity during the **generation of functional tests**. With *Conformiq Qtronic™*, you can generate your test cases **automatically**, efficiently and quickly. This tool designs tests scripts in a lot of formats including Python, TCL, TTCN-3, C, C++, Visual Basic, Java, JUnit, Perl, Excel, HTML and many others...

## Seminar « CMMI, Model Driven Testing and Capitalisation »

Verifysoft Technology concluded a new partnership with the French company Spirula, co-author of **CMMI** (Capability Maturity Model Integration).

Spirula helps its customers to define the most **efficient development processes**, to implement dashboards for project monitoring and to enhance the reliability of estimates for cost, effort and planning.

As part of this partnership, a seminar on the topic of "CMMI, Model Driven Testing and Capitalisation" will be organised on the 18th of May 2010 in Offenburg (Germany). This event will be handled in English. The subscription to this seminar is free of charge.

## Seminar : « Testing Embedded Systems »

Take part in our 2-days in-house seminar about **testing embedded systems** with Professor Dr. Ing. Fischer, handled in English..

Thanks to this seminar, you will have all the knowledge and abilities required for testing effectively embedded systems.

The participants will be able to improve their own projects thanks to concrete exercises and examples given.

We also propose it in German on the:

- 21<sup>st</sup>-22<sup>nd</sup> of June 2010 in Berlin
- 25<sup>th</sup>-26<sup>th</sup> of October 2010 in Stuttgart

Verifysoft gives you the opportunity to evaluate its tools for free:

- Code Coverage Analyser: Testwell CTC++ / CTC for Java and C#
- Code Complexity Measurement Tools: Testwell CMT++ / CMTJava
- Unit Test Aider: Testwell CTA++
- Automatic Test Generator: Conformiq Qtronic™
